

JOIN AN INNOVATIVE RESEARCH STUDY

WHAT ARE STEM CELLS?

Stem cells can become any type of cell in the body, such as brain or heart cells. Researchers use stem cells to learn more about diverse medical conditions, and how they may be treated or even cured.

WHAT DOES THE STUDY INVOLVE?

Participation involves visiting a study site in New York City to provide samples (such as skin, blood, and saliva) and health information.

NYSCF researchers use these samples to create stem cells. NYSCF also stores and shares samples and cells with researchers worldwide to advance scientific discovery.

Compensation will be provided to participants who complete the study.

HOW DO I PARTICIPATE?

If you are interested in participating or would like more information, please contact the NYSCF Clinical Research office at **(212) 927-1801** or **clinicalresearch@nyscf.org**.
